The Child Oral Health Service would like to remind parents and carers of the importance of regular, supervised oral hygiene.

- When children start school they are often keen to be as independent as possible. Most children don't have the skills to brush their own teeth well enough to prevent decay until age 8 10, depending on their level of dexterity.
- Thorough brushing twice per day prevents significantly more dental decay than brushing once per day or less often.
- Help your child gently brush their teeth and gums twice per day with a small amount of fluoride toothpaste.
